MoridainDefense · engineer eval

Engineer pilot handout · 20 October 2026

Job: Turn one **fusion alert export** into **role-specific top-N** lists (pilot, TOC, ship, SOF).

Compare to: Your **rule cascades / threshold stacks** on the same alert stream.

Pilot KPIs: **Recall@K** for severe threats; cross-cuing; injection recovery; display latency on constrained endpoints.

30-day pilot: **Production-shadow** side-by-side on real alert traffic (not lab-only synthetic).

Pass: Beats incumbent on agreed K and cross-cue metrics with documented role configs.

Lab evidence (scope): Synthetic traffic vs simple threshold cascade showed large recall@10 gain; **not** field proof until your export replay.

Do not compare to: Replacing prime fusion/C2 engines.

Integration: Compact wire format; integer-friendly render path for low-SWaP displays.
