SolvSRK-Edge · engineer eval

Engineer pilot handout · 20 October 2026

Job: Same **SolvSRK revision** from desktop sim through HIL to onboard ARM/RTOS.

Compare to: Separate “fast sim” and “certified onboard” integrator builds.

Pilot KPIs: x86↔ARM parity on agreed dynamics; **WCET** on your flight processor.

30-day pilot: HIL binary = deploy binary; pin one revision in SBOM.

Pass: Parity gate + WCET within cycle budget on your processor.

Lab evidence (scope): Six-problem parity manifest; qualify WCET on **your** CPU.

Do not compare to: Terminal homing on contested flight controllers without separate validation.
