TruuImage · engineer eval

Engineer pilot handout · 20 October 2026

Job: Screen **still images** for real vs AI-generated vs manipulated before analyst floor or release.

Compare to: Commercial detection APIs and published AI-gen benchmark suites (AIGIBench-class).

Pilot KPIs: Balanced accuracy or precision/recall at your policy threshold on **your generator mix**; throughput on your ingest path.

30-day pilot: Blind holdout from your OSINT/ISR archive, **or** enrollment on an agreed public benchmark protocol with Resonix.

Pass: Meets agreed accuracy floor on that protocol or archive; latency budget documented for **batch** ingest (not assumed real-time video without scoping).

Lab evidence (scope): Internal holdout metrics only until public benchmark enrollment completes; **do not** equate internal **~96%** to public leaderboard numbers without same protocol.

Do not compare to: SIGINT, malware, or legal admissibility out of the box.

Integration: Single-image API; verdict + confidence; on-prem or air-gapped path available.
